Blocks of permutations

Definition (Block of a permutation w)

- Type A: sub-permutation matrix
- Type free: J, K such that ${}^J w = w^K$

- Example: $w := 36475812$
- Simple permutation: cf. [Albert, Atkinson 05]
- {blocks of w}: sub-lattice of the Boolean lattice

Definition (HST09: Cutting poset $(W, \sqsubset)$)

$u \sqsubset w$ if $u = w^J$ with J block

- (almost) lattice
- Möbius function: inclusion-exclusion along minimal blocks

Blocks of permutations

Definition (Block of a permutation w)

- Type A: sub-permutation matrix
- Type free: J, K such that ${}^J w = w^K$

- Example: $w := 36475812$
- Simple permutation: cf. [Albert, Atkinson 05]
- $\{\texttt{blocks of } w\}$: sub-lattice of the Boolean lattice

Definition (HST09: Cutting poset $(W, \sqsubset)$)

$u \sqsubset w$ if $u = w^J$ with J block

- (almost) lattice
- Möbius function: inclusion-exclusion along minimal blocks

Blocks of permutations

Definition (Block of a permutation w)

- Type A: sub-permutation matrix
- Type free: J, K such that ${}^{J}w = w^{K}$

- Example: $w := 36475812$
- Simple permutation: cf. [Albert, Atkinson 05]
- {blocks of w}: sub-lattice of the Boolean lattice

Definition (HST09: Cutting poset $(W, \sqsubset)$)

$u \sqsubset w$ if $u = w^{J}$ with J block

- (almost) lattice
- Möbius function: inclusion-exclusion along minimal blocks

Blocks of permutations

Definition (Block of a permutation w)

- Type A: sub-permutation matrix
- Type free: J, K such that ${}^J w = w^K$

- Example: $w := 36475812$
- Simple permutation: cf. [Albert, Atkinson 05]
- $\{\texttt{blocks of } w\}$: sub-lattice of the Boolean lattice

Hecke monoid

Definition (0-Hecke monoid $H_0(W)$ of a Coxeter group W)

Generators : $\langle \pi_1, \pi_2, \dots \rangle$ (simple reflections)
Relations: $\pi_i^2 = \pi_i$ and braid relations

Theorem

$|H_0(W)| = |W|$
+ lots of nice properties

Motivation: simple combinatorial model (bubble sort)
appears in Iwahori-Hecke algebras, Schur symmetric functions, Schubert, Kazhdan-Lusztig polynomials, and Macdonald, (affine) Stanley symmetric functions, mathematical physics, Schur-Weyl duality for quantum groups, representations of $GL(\mathbb{F}_q)$, ...

Hecke monoid

Definition (0-Hecke monoid $H_0(W)$ of a Coxeter group W)

Generators : $\langle \pi_1, \pi_2, \dots \rangle$ (simple reflections)
Relations: $\pi_i^2 = \pi_i$ and braid relations

Theorem

$|H_0(W)| = |W|$
$+$ *lots of nice properties*

Motivation: simple combinatorial model (bubble sort)
appears in Iwahori-Hecke algebras, Schur symmetric functions, Schubert, Kazhdan-Lusztig polynomials, and Macdonald, (affine) Stanley symmetric functions, mathematical physics, Schur-Weyl duality for quantum groups, representations of $GL(\mathbb{F}_q)$, ...

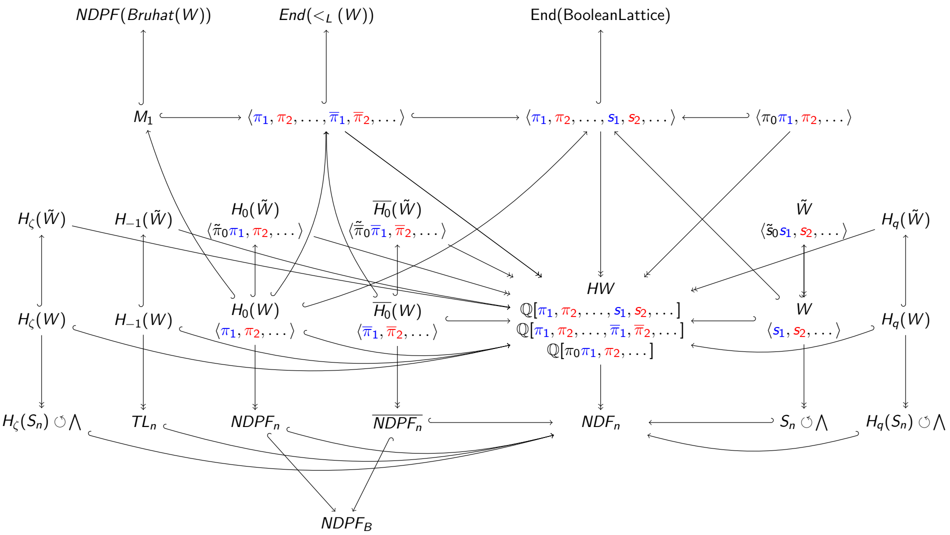
The Big Picture



The bi-Hecke monoid

Question

Size of $M(W) = \langle \pi_1, \pi_2, \ldots, \overline{\pi}_1, \overline{\pi}_2, \ldots \rangle$

$|M(S_n)| = 1, 3, 23, 477, 31103, ?$

- How to attack such a problem?
- Generators and relations?
- Representation theory?

Theorem (HST08)

$M(W)$ admits $|W|$ simple / indecomposable projective modules

- Why do we care?

$$|M(W)| = \sum_{w \in W} \dim S_w . \dim P_w$$

Representation theory of algebras

Module: vector space V with a morphism $M \mapsto \text{End}(V)$
Simple module: V contains no nontrivial submodule
Indecomposable module: V cannot be written as $V = V_1 \oplus V_2$
Projective module: $V \oplus \cdots = \mathbb{C}[M] \oplus \cdots \oplus \mathbb{C}[M]$

Theorem (See e.g. Curtis-Reiner)

Simple modules $\leftrightarrow$ indecomposable projective modules
Dimension formula, ...

Key role of idempotents:

- eV projective module
- If $f = uev$ then fM is isomorphic to a submodule of eM

Representation theory of algebras

Representation theory of monoids

Definition (J-(pre)order)

$x \leq_J y$ iff $x = uyv$, for some $u, v \in M$

$x, y \in M$ are in the same J-class if $x \leq_J y$ and $y \leq_J x$

A J-class is regular iff it contains an idempotent

Theorem (See e.g. Ganyushkin, Mazorchuk, Steinberg 07)

The regular J-classes (essentially) determine the simple modules.

$\Longrightarrow$ Combinatorial Representation Theory

Representation theory of $M(W)$

Theorem (HST'08)

$M(W)$ admits $|W|$ simple modules

Sketch of proof.

- M acts transitively on intervals $[u, v]_L$
- The image set of an idempotent is an interval $[u, v]_L$
- $\exists!$ e_w idempotent with image set $[1, w]_L$, for any $w \in W$
- $(e_w)_{w \in W}$: transversal of the regular J-classes
  - $f = uev$ if and only if $\mathrm{im}(f)$ is a subinterval of $\mathrm{im}(e)$
- The groups $e_w M e_w$ are trivial

Sketch of proof.

- M acts transitively on intervals $[u, v]_L$
- The image set of an idempotent is an interval $[u, v]_L$
- $\exists!\ e_w$ idempotent with image set $[1, w]_L$, for any $w \in W$
- $(e_w)_{w \in W}$: transversal of the regular J-classes
    - $f = uev$ if and only if $\mathrm{im}(f)$ is a subinterval of $\mathrm{im}(e)$
- The groups $e_w M e_w$ are trivial □

Problem

Dimension of simple and projective modules?

Representation theory of $M(W)$

Theorem (HST'08)

$M(W)$ admits $|W|$ simple modules

Sketch of proof.

Problem

Dimension of simple and projective modules?

The "Borel" submonoid M_1

Definition

Submonoid $M_1 := \{f \in M, f(1) = 1\}$

Properties (HST'09)

- *Generated by e_w for w grassmanian*
- *Weakly increasing and contracting on Bruhat $\Longrightarrow$ J-trivial*
- *Idempotents: $(e_w)_{w \in W}$*
- $|W|$ *simple modules of dimension* 1
- *Semi simple quotient: monoid algebra of $(W, \vee_L)$*
- *Conjugacy order among idempotents: $<_{LR}$*
- $\dim P_w = |\{f \in M_1, f(w) = w...\}|$?

Problem

Inducing those results to M?

The "Borel" submonoid M_1

Definition

Submonoid $M_1 := \{f \in M, f(1) = 1\}$

Properties (HST'09)

- *Generated by e_w for w grassmanian*
- *Weakly increasing and contracting on Bruhat $\Longrightarrow$ J-trivial*
- *Idempotents: $(e_w)_{w \in W}$*
- *$|W|$ simple modules of dimension 1*
- *Semi simple quotient: monoid algebra of $(W, \vee_L)$*
- *Conjugacy order among idempotents: $<_{LR}$*
- $\dim P_w = |\{f \in M_1, f(w) = w...\}|$?

- $\dim P_w = |\{f \in M_1, f(w) = w...\}|$?

Problem

Inducing those results to M*?*

Representation theory of J-trivial monoids

Theorem (HST'09)

Combinatorial description of:

- *Simple modules*
- *Projective modules*
- *Cartan matrix*
- *Quiver*
- *q-Cartan matrix (in progress)*

in term of some statistic on M

Question

Induction from "Borel" submonoids?

Conclusion

General strategy:

- Find combinatorial models for algebras and representations
- As simple as possible, but no simpler
- Concrete and effective
- Use representation theory and computer exploration as a guide
- Find the right point of view where proofs become trivial
